

# Watch out for this logo

## The ECB-S-certificate

This metal label is the certification mark affixed to all products which satisfy the strict criteria of the ECB-S. Your advantage: You buy type-tested and certified quality which keeps its promises – for sure!

This is indicated by the certification mark:

### 1. European Standard – Your advantage:

The standards are applicable all over Europe and, as a result, are recognized. They ensure state of the art technology.

### 2. Consecutively numbered by the ECB-S – Your advantage:

Best quality thanks to seamless quality control. Because every product can be traced back through all production steps – for your security.

### 3. Product classification – Your advantage:

A guaranteed performance range because the product classification stands for defined quality:

- Resistance grade (e.g. I) and security level (e.g. S2) for protection against burglary
- Protection class (e.g. S 60 DIS) providing resistance to fire

**CERTIFIED SECURE STORAGE UNITS –  
SECURITY WITH STAMP AND SEAL**

**– A SMALL GUIDE –**

## Invest only in security that keeps its promises.

We give you a guarantee for security!

Your valuable possessions must be stored securely. But, is a simple file cabinet with a security lock really sufficient? What's the difference between the various types of safes?

This small guide will give you more security in the selection of the right product.

What do you store at home or in your office?

- ✓ Jewellery
- ✓ Valuables
- ✓ Collector's items (coins, etc.)
- ✓ Cash
- ✓ Documents
- ✓ Data media

Good reasons to play it safe. So watch out for this metal label.

Your insurance company will be glad you did!

Because every insurer is prepared to guarantee appropriate cover if proven and tested security is provided through ECB-S-certified products. So, you won't be in for a nasty surprise with your insurer in the event of damage.

### Tested to extremes

In order to ensure that your security product does not fail when it really matters, the ECB-S-certified products undergo extremely stringent tests.

The individual test specifications depend on the resistance grade. Once a product has successfully passed the test, it is given the certification mark of the ECB-S indicating the respective resistance grade. Then this type of product can be manufactured to the required quality level and may be labelled with the ECB-S certification mark. As a result, you have a guarantee for the proven effectiveness of your product.

Our experience gives you additional security

The ECB-S has nearly 40 years of experience in the testing and certification of security technology. As a result, we can guarantee the sustainability and long life of the ECB-S certificate well into the future.

By investing in and promoting research projects, we are always technically up to date. Stronger cooperation with the insurance sector enables to provide security solutions in which certified product quality and guaranteed insurance cover go hand in hand.

### Security knows no bounds

Thanks to the intense co-operation in the development of European standards, the ECB-S has made a good name for itself and, meanwhile, belongs to the leading certification bodies for secure storage units in Europe. The ECB-S certificate now enjoys international recognition.

### Buying cheap may cost you dear

In order to store valuables really securely, you should always pay attention to provable quality standards. Otherwise what seems to be a bargain may prove to be costly. Because:

- The insurance sector does not provide guaranteed insurance cover for cheap products
- You do not have a real guarantee of performance
- You expose your possessions to an unnecessarily high risk
- You do not have guaranteed security
